Leica VT1000 S

Vibrating-blade microtome

Instructions for Use
English

Order No.: 14 0472 80101 - Revision N

Always keep this manual with the instrument.
Read carefully before working with the instrument.
The information, numerical data, notes and value judgments contained in this Instructions for Use represent the current state of scientific knowledge and state-of-the-art technology as we understand it following thorough investigation in this field.

We are under no obligation to update the present Instructions for Use periodically and on an ongoing basis according to the latest technical developments, nor to provide our customers with additional copies, updates etc. of this Instructions for Use.

To the extent permitted in accordance with the national legal system as applicable in each individual case, we shall not be held liable for erroneous statements, drawings, technical illustrations etc. contained in this Instructions for Use. In particular, no liability whatsoever is accepted for any financial loss or consequential damage caused by or related to compliance with statements or other information in this Instructions for Use.

Statements, drawings, illustrations and other information regarding the contents or technical details of the present Instructions for Use are not to be considered warranted characteristics of our products.

These are determined only by the contract provisions agreed between ourselves and our customers.

Leica reserves the right to change technical specifications as well as manufacturing processes without prior notice. Only in this way is it possible to continuously improve the technology and manufacturing techniques used in our products.

This document is protected under copyright laws. All copyrights to this documentation are held by Leica Biosystems Nussloch GmbH.

Any reproduction of text and illustrations (or of any parts thereof) by means of print, photocopy, microfiche, web cam or other methods – including any electronic systems and media – requires express prior permission in writing by Leica Biosystems Nussloch GmbH.

For the instrument serial number and year of manufacture, please refer to the nameplate on the back of the instrument.

1. Important Information

1.1 Symbols and their meanings

Leica Biosystems GmbH assumes no liability for consequential loss or damage due to failure to observe the following instructions, particularly in relation to transportation and package handling, and failure to observe the instructions for handling the instrument carefully.

Important Information

Symbol: 

Title of the symbol: This way up
Description: Indicates correct upright position of the transport package.

Symbol: 

Title of the symbol: Stack limit
Description: The largest number of identical packages allowed to be stacked; "2" stands for the number of permitted packages.

Symbol: 

Title of the symbol: Temperature limit for transport
Description: Indicates the temperature limits for transport to which the device can be safely exposed.

Symbol: 

Title of the symbol: Temperature limit for storage
Description: Indicates the temperature limits for storage to which the device can be safely exposed.

Symbol: 

Title of the symbol: Humidity limitation for transport and storage
Description: Indicates the range of humidity for transport and storage to which the device can be safely exposed.

Symbol: 

Title of the symbol: Tilt indicator
Description: Tip-n-Tell indicator to monitor whether the shipment has been transported and stored in upright position according to your requirements. With a pitch of 60° or more, the blue quartz sand flows into the arrow-shaped indicator window and sticks there permanently. Improper handling of the shipment is immediately detectable and can be proven definitively.
1 Important Information

Symbol: Shockdot Impact Indicator
Description: In the Shockwatch system, a shock dot shows shocks or impacts that are above a specified intensity through red coloration. Exceeding a defined acceleration (g value) causes the indicator tube to change color.

Symbol: Recycling
Description: Indicates, that the item can be recycled where correct facilities exist.

Symbol: Regulatory Compliance Mark (RCM)
Description: The Regulatory Compliance Mark (RCM) indicates a device’s compliance with applicable ACMA technical standards of New Zealand and Australia - that is, for telecommunications, radio communications, EMC and EME.

1.2 Instrument model

All information provided in these Instructions for Use applies only to the instrument type indicated on the title page. A nameplate indicating the instrument serial number is attached to the rear side of the instrument.

1.3 Information

When making inquiries, please specify correctly:

- Instrument model
- Serial number

1.4 Qualification of personnel

The Leica VT1000 S should be operated by trained laboratory personnel only. The instrument is intended for professional use only.

All laboratory personnel designated to operate this instrument must read these Instructions for Use carefully and must be familiar with all technical features of the instrument before attempting to operate it.
1.5 Intended use/improper use

The Leica VT1000 S is used for sectioning in the fields of medicine, biology and industry, and is especially designed for sectioning fixed or unfixed fresh tissue in a buffer solution.

**Warning**

The Leica VT1000 S may be used for research purposes only. Sections made using the Leica VT1000 S must NOT be used for diagnostics!

The instrument must be used exclusively according to the instructions contained in these Instructions for Use.

Any other use of the instrument is considered improper.
10

2. Safety

## 2.1 Safety notes

These Instructions for Use includes important information related to the operating safety and maintenance of the instrument.

The Operating Manual is an important part of the product, and must be read carefully prior to startup and use and must always be kept near the instrument.

This instrument has been built and tested in accordance with the safety requirements for electrical equipment for measurement, control, and laboratory use.

To maintain this condition and ensure safe operation, the user must observe all notes and warnings contained in these Instructions for Use.

The current EC Declarations of Conformity and UKCA Declaration of Conformity can be found on the Internet: www.LeicaBiosystems.com

### Note

These Instructions for Use must be appropriately supplemented as required by the existing regulations on accident prevention and environmental safety in the operator’s country.

### Warning

The protective devices located on the instrument and the accessories must not be removed or modified. The instrument must only be opened and repaired by service technicians authorized by Leica.

## 2.2 Warnings

The safety devices installed in this instrument by the manufacturer only constitute the basis for accident prevention. Operating the instrument safely is, above all, the responsibility of the owner, as well as the designated personnel who operate, service or clean the instrument.

To ensure trouble-free operation of the instrument, make sure to comply with the following instructions and warnings.
2.3 Safety instructions for handling the instrument

Danger

Caution
Extremely sharp blades pose risk of injury when touched!

Caution
Fresh tissue poses risk of infection!

Caution
When not in use, cover magnifier with corresponding lid to avoid risk of fire.

Warning
Avoid touching live parts under any circumstances!

Proper handling

• Be sure to handle knives and blades very cautiously!
• Never touch the cutting edge of knives and blades!
• Do not leave knives, blades and bladed knife holders unprotected.
• All appropriate safety precautions must be met to avoid the risk of infection.
• Protective clothing according to safety regulations for “Working with harmful substances” (Safety mask, gloves, protective clothing) must be worn!
• Cover the magnifier during work breaks as it may act as a burning glass when not covered!
• In case of emergency, press the red EMERGENCY STOP switch (at the right side of the instrument). To release the switch, turn it in the direction of the arrow.
• The instrument may be opened by authorized service personnel only.
• Before removing the cover, ensure that the instrument is unplugged.
3 Instrument Characteristics

3.1 Technical data

Electrical Specifications
- Nominal supply voltage: 100 V - 240 V
- Nominal supply frequencies: 50/60 Hz
- Mains supply voltage fluctuations: Not to exceed ± 10% of the nominal supply voltage
- Power consumption: 50 VA
- Mains input fuses: 2x T1.25A L 250VAC

Dimensions and Weight Specification
- Overall size of device in operating mode: 480 mm x 360 mm x 200 mm
- Overall size serial packaging: 780 mm x 585 mm x 656 mm
- Empty weight (without accessories, kg): 17 kg
- Overall weight (with accessories, kg): 19 kg
- Device weight including packaging (kg): 40 kg

Environmental Specification
- Operating altitude (meters): up to 2000 m above sea level
- Temperature (operation) (min/max): min. +5 °C to max. +40 °C
- Relative humidity (operation) (min/max): max. 80%
- Temperature (transit) (min/max): -29 °C to +50 °C
- Relative humidity (transit/storage): 10% - 85% rh
- Operating noise level: <70 dB

Emissions and Boundary Conditions
- Overvoltage category to IEC 61010-1: II
- Pollution degree to IEC 61010-1: 2
- Means of protection to IEC 61010-1: Class I
- Degree of protection to IEC 60529: IP20
- Heat emission: 50J/s
- A-weighted noise level, measured at 1 m distance: <70 dB
- EMC class: B

Electrical Connections and Interfaces
- Power supply: Connecting socket for power cord
- Electrical Connections: Connection for foot switch, 9-pole

Mechanical Connections
- Interfaces to other devices: Fixture for magnifier support, Knife holder, Buffer tray S, Magnifier support, Magnifier, Module Hi-Power spot, LED 1000 (optional), Module LED Hi-Power spots, 2-arm (optional)

If the supplied local power cord is defective or lost, please contact your local Leica Biosystems representative.

**Note**

When ordering additional accessories, compare the parts received with the parts ordered. If the parts received do not match your order, contact the sales company responsible for your order immediately.
4.2 Unpacking and setting up the instrument

Note

The packaging has two indicators, ShockDot Impact Indicator and Tilt Indicator, that indicate improper transport. When the instrument is delivered, check these first. If one of the indicators is triggered, the package was not handled as prescribed. In this case, please mark the shipping documents accordingly and check the shipment for damage.

- Remove the packing strap and the adhesive tape (→ Fig. 4-1).
- Remove the carton lid (→ Fig. 4-2).
- Take out the accessory carton (→ Fig. 4-3).
- Take Allen key No. 8 out of the accessory carton and put it aside for later use.
- Remove the fixing carton (→ Fig. 4-4).
- Remove the outer carton wall (→ Fig. 4-5).
- Lift the instrument out of the carton by the carrying straps (→ Fig. 4-6) and place it on a suitable stable laboratory table.
• Tilt the instrument including the baseplate (→ Fig. 5) - hold the instrument with one hand on the recess (→ Fig. 5-2) for the buffer tray! NEVER lift or hold it by the cutting head (→ Fig. 5-3)! Unscrew the screw (→ Fig. 5-1) using the size 8 Allen key provided and remove the base plate.

• Using both hands at the sides (→ Fig. 6), grasp the bottom of the instrument and carefully place it on a suitable laboratory table.

Note
Compare with the attached packing list to make sure the delivery is complete.

Note
The transport carton and included retaining elements should be kept in case a return shipment is necessary later. To return the instrument, follow the instructions above in reverse order.

Assembling the drain tube

• Bottom of the instrument (→ Fig. 7).
• Connect the drain tube (→ Fig. 7) to the bottom of the instrument (→ Fig. 7-1).
• Ensure that the loose end of the drain tube is closed tightly with the matching stopper.
• Secure the loose end of the drain tube in the holder at the rear of the instrument (→ Fig. 7-2).
Assembling the magnifier support and foot switch (optional)

- The magnifier support (→ Fig. 8-1) is packaged separately.
- Set it on the instrument as shown in (→ Fig. 8).
- Attach the optional foot switch.
- Securely plug the foot switch into the 9-pin socket (→ Fig. 8-2).

Note

When transporting the instrument, always do so WITHOUT the magnifier support!
5. Operation

5.1 Installation site requirements

The place of installation must meet the following requirements:

- The instrument is designed for indoor use only.
- The power plug must be freely and easily accessible.
- Power supply at a distance no greater than the length of the power cable (3m) – an extension cable must not be used.
- Level installation location,
- Substrate as free of vibration as possible,
- Relative humidity should not exceed 80 %
- Room temperature consistently between +5 °C and +40 °C
- Avoid vibrations, direct sunlight, and large temperature fluctuations!

**Warning**

The instrument may not be operated in hazardous locations.

**Warning**

The instrument MUST be connected to a grounded power socket. Use only a provided power cable that is intended for the local power supply.

5.2 Setting up the instrument

**Note**

The instrument MUST be connected to a grounded power socket. Use only a provided power cable that is intended for the local power supply.

**Warning**

The instrument MUST be set up so that the power plug and switch are free and easily accessible at all times!

**Note**

The Leica VT1000 S is equipped with an autoranging power supply to cover voltages from 100 V to 240 V.

After switching on the main switch, the instrument carries out an initial startup run: The blade returns to the rear starting position after a short forward movement.

1. Put the main switch at the back of the instrument to the **OFF** position.
2. Make sure the power cable is connected correctly to the instrument.
3. Attach the magnifier support.
4. Insert the buffer tray.
5. Insert the knife holder.
6. Insert a blade into the knife holder.
7. Connect the magnifier support with Module LED Hi-Power spots, 2-arm, as shown in (→ Fig. 9). Insert plug (→ Fig. 9-1) of the Module LED Hi-Power spots, 2-arm, into socket (→ Fig. 9-2) at the Module Hi-Power spot, LED 1000.

8. Connect the optional foot switch at the rear of the instrument.
9. Plug the power cable into the wall socket.
10. Switch the instrument on (main switch).

10-speed rotating potentiometer with scale

Function:
Continuous knife feed adjustment from 0.05 - 2.5 mm/s:
Knife return stroke is performed at constant speed of 5 mm/s.
The additional locking lever (→ Fig. 10-1) (lever in 12 o’clock position) prevents the speed setting from being accidentally changed while sectioning is in progress.

Rotary knob with scale from 0 to 10
Function:
Continuous adjustment of knife sectioning frequency (vibration) from 8 - 100 Hz.

Caution
Practice working with the controls without a blade holder inserted. Only insert the knife holder when you are completely familiar with all control functions.
Function:
- When the **V-Max** button is activated in manual mode (LED on - red light) and the REV/FORW button is pressed, the knife moves towards the specimen at maximum speed.
- When the **START** button is pressed, the LED in the **V-Max** button is extinguished. Sectioning starts at the speed previously selected.

**Setting a sectioning window:**

**Warning**
If - accidentally - only one limit stop of the sectioning window is set, the knife covers the maximum sectioning range!

- Activate the V-Max button. Press REV/FORW toggle switch for fast movement of the blade towards the specimen. Press the button to set the first limit of the sectioning window.
- Press REV/FORW once again, moving the blade edge past the specimen block and press once more to set the second sectioning window limit.
- Press **START** to deactivate V-Max. The knife edge moves back to the first sectioning window limit and resumes sectioning at the previously selected speed (10-speed rotary potentiometer).

**Function:**
- Start single or continuous sectioning stroke – according to whether SINGLE or CONT mode has previously been selected (→ p. 24 – LED indication with +/- adjusting button, DISP and CLR function keys).
- Specimen feed (section thickness) takes place prior to each section.
- Retraction (specimen is lowered) takes place when the knife reaches the rear inversive point.
- In SINGLE mode, the knife stops automatically in the rear end position.
- In CONT mode, **START/STOP** has to be pressed again to stop the sectioning movement. The knife stops in the rear end position.
- A sectioning process, once started, will continue.

**Function:**
Immediate interruption of knife movement.
- Press **PAUSE** once again to continue sectioning.
**Operation**

**Toggle switch**

**Function:**

To move the knife towards the specimen.

Can also be used for manual sectioning.

Because of safety aspects the **FORW** movement is carried out only while the toggle switch is pressed and held; the **REV** movement is carried out completely once the switch has been locked into place.

To stop the **REV** movement before reaching the rear end position, switch the toggle switch manually back into its center position.

The **REV/FORW** switch can also be used to stop a sectioning stroke which has been activated by pressing the **START/STOP** button.

**LED indication with -/+ adjusting button, DISP and CLR function keys**

**Function of LED indication:**

Indicates the selected sectioning thickness or totalized section thickness.

**Function of the -/+ button:**

Selection of section thickness in 1-μm steps from 0 to 999 μm.

The specimen feed (in the preselected section thickness) takes place at the beginning of each sectioning stroke.

**Function of the DISP button:**

To select between two modes of operation:

"μm" = section thickness

"Σμm" = section thickness totalizing

**Function of the CLR button in section thickness totalizing mode:**

Sets the value indicated in the section thickness totalizing mode (Σμm) to zero.
**Function:**
Switch between

- Single stroke (1 sectioning stroke / 1 return stroke of the blade) and continuous stroke (continuous sectioning until the START/STOP button is pressed).
- To stop the blade at the rear end position in CONT mode press the START/STOP button.
- The sectioning stroke in progress will be completed and the blade will then stop at the selected end position of the sectioning range.

**Toggle switch**

**Function:**

- Motorized height adjustment of buffer tray. Maximum travel: 15 mm (= total vertical specimen stroke).

The upper and lower end positions of the buffer tray are indicated each by an audible warning signal and a red LED.

While the knife is in motion the UP/DOWN toggle switch is inoperative.

For the DOWN motion, the toggle switch can be locked in the DOWN position; For the UP motion, the switch must be pressed and held in the UP position.

When the lowest possible position is reached with the toggle switch being locked in DOWN there will be both an audible and a visible signal. Once the switch is unlocked, the buffer tray is automatically raised until both signals switch off.

- To select the retraction thickness, to deactivate retraction or to set the volume of the Leica VT1000 S warning signal, press the following function key combinations:

**Volume adjustment:**

- Select section thickness mode ("μm") by pressing the DISP button.
- Press the CLR and + buttons simultaneously. Display: "BE 15". The volume can now be adjusted via the -/+ button. "0" is equivalent to no sound signal.
- To quit the programming mode, press CLR.
5 Operation

Adjusting the retraction

- In programming mode, press **DISP** to display the specimen retraction menu.
- Display: “LO”.
- Set specimen retraction between 1 and 999 μm via the \(-/\) button; or disable by selecting “0”.
- The selected value will be displayed in the FEED window.
- Press **CLR** to quit the menu function.

5.4 Adjusting the amplitude

- To obtain excellent sectioning results, the amplitude requires adjustment according to the specimen type being sectioned.

To this end:

- With a No. 2.5 Allen key loosen the clamping screw (→ Fig. 17-1) and secure the eccentric on the bottom with your finger. Selectable amplitude positions are, from left to right: 0.2 mm; 0.4 mm; 0.6 mm; 0.8 mm; 1 mm.
- Slide the amplitude clamping screw to the desired amplitude position and retighten.

Note

When adjusting the amplitude setting, do not remove the clamping screw, simply loosen it. The instrument is shipped with the amplitude set to 0.6 mm.
5.5 Working with the Leica VT1000 S on a daily basis

- Mount the buffer tray (→ Fig. 18-1) onto the bolt (→ Fig. 18-2) inside the cooling bath (→ Fig. 18-3).
- Secure the buffer tray by relocating the clamping lever (→ Fig. 18-4) to the right (in the direction of the arrow).
- Via the UP/DOWN toggle switch lower the buffer tray to its lowest position (indicated by audible signal and red LED).
- Move the toggle switch back to the mid-position - the audible signal stops.
- If necessary, fill crushed ice into the cooling bath (→ Fig. 18-3).
- Fill the buffer tray (→ Fig. 18-1) with cooled buffer solution.

- Fix the specimen onto the specimen disc with cyanoacrylate adhesive (→ Fig. 19).

- Insert the specimen disc (→ Fig. 20-1) with the specimen into the buffer tray using the manipulator (→ Fig. 20-2).
• Use the manipulator (→ Fig. 21-2) to rotate the specimen disc into the desired position. Tighten with a No. 3 Allen key (→ Fig. 21-1).

• The clamping screw or one of the clamping devices must not be located over the gap in the specimen disc, as in these positions clamping the specimen disc is not possible.

• Remove the manipulator (→ Fig. 21-2).

Adjusting the clearance angle

• Adjust the clearance angle (→ Fig. 22-1) of the knife holder.

To this end:

• Loosen the two lateral screws (→ Fig. 22-2) (Allen key, No. 3).

• Use the adjusting lever (→ Fig. 17-1) to select the desired clearance angle.

• Secure the selected clearance angle by tightening the two screws (→ Fig. 22-2).

Note

The Leica VT1000 S does not require the readjustment of the clearance angle every time you change the blade. Make an adjustment only if required by an application for technical reasons (e.g. different type of tissue).
To insert the blade, loosen the clamping screw (→ Fig. 23-1) located on the knife holder.

Clean the blade.

Insert the blade into the knife holder (→ Fig. 24-1).

Secure the blade with clamping screw (→ Fig. 24-2).

**Warning**
The blade must fit tightly against the entire length of the inner limit stop of the knife holder.
The blade must be clamped parallel to the front edge of both knife holder clamping jaws.

Fix the knife holder (→ Fig. 25-1) with the knife holder clamping screw (→ Fig. 25-2).

Use the REV/FORW rocker button to place the blade edge right behind the rear edge (from user’s view) of the specimen.

Pull the UP/DOWN rocker button into the UP direction and keep it in the UP position until the specimen surface is shortly below the level of the blade edge (see arrow (→ Fig. 26-1)).
5.6 **Routine daily maintenance and switching off the instrument - Leica VT1000 S**

After all daily procedures have been finished, perform the following:

- Switch off the main switch at the back of the instrument.
- Place the magnifier cover on the magnifier.
- Remove the knife holder.
- Take the blade out of the knife holder and dispose it properly and safely.
- Remove the specimen disc and lay it flat on the stage.
- Remove the specimen using a single-edge blade. Then, remove remains of cyanoacrylate adhesive from the specimen disc.
- Remove and empty out the buffer tray. Dispose of the contents of the buffer tray properly.
- Drain the cooling bath.
  To do so, release the tube from its holder at the rear of the instrument and dispose of the contents of the ice bath into a suitable vessel. Then wipe off with a dry cloth.

**Caution**

The contents of the ice bath can become contaminated if buffer solution is spilled over it.
## Malfunctions: Meaning and Troubleshooting

**Warning**

When working with directional specimen discs, move the buffer tray to its lowest position directly after switching on the instrument!

</tr>
</tbody>
</table>

### Note

These symptoms may occur from time to time and are unavoidable, as the clamping screws which have to be operated by the user cannot be sealed.

### Warning

If the clattering sound does not cease once the clamping screws have been retightened, do not hesitate to call the Technical Service immediately. Do not use the instrument when in this condition.
7. Cleaning and Maintenance

7.1 Cleaning the instrument

**Warning**

Always remove the knife / blade before detaching the knife holder from the instrument. Always put the knife (blade) back into the knife case or blade dispenser when not in use!

When using cleaners, comply with the safety instructions from the manufacturer and the labor-safety regulations at your laboratory.

When cleaning the outer surfaces, do not use xylene or solvents containing acetone or xylene. The finished surfaces are not resistant to xylene or acetone!

Ensure that liquids do not enter the interior of the instrument during cleaning.

**Before each cleaning, carry out the following preparatory steps:**

- Switch off the instrument and disconnect the power plug.
- Remove the blade from the knife holder and insert it in the receptacle at the bottom of the blade dispenser.
- Remove the knife holder for cleaning.
- Remove the specimen plate from the buffer tray and lay it flat on the stage. Carefully remove the specimen with a single-edge blade.
- Remove section waste using tweezers or a brush.
- Remove the buffer tray, empty it and rinse it separately with water (→ p. 30 – 5.6 Routine daily maintenance and switching off the instrument - Leica VT1000 S).

**Instrument and outside surfaces**

If necessary, the varnished outside surfaces of the control panels can be cleaned with a mild commercial household cleaner or soap water and then be wiped with a cloth.

The instrument must be completely dry before it can be used again.

**Cleaning the knife**

**Warning**

When cleaning the knife/blade, always wipe from the knife or blade back towards the cutting edge, NEVER wipe in the opposite direction - risk of injury!

Clean using an alcohol-based solution or acetone.
7.2 Changing the fuse

**Warning**

Before changing a fuse, always switch off the instrument first and remove the instrument cable completely. The instrument must have cooled down and the paraffin tank must be empty.

When changing a fuse, do NOT use any fuses other than the spare fuses supplied with the instrument.

If the instrument fails completely, first check the power supply at the power socket.

Then check the fuses at the rear side of the instrument.

To do so, proceed as follows:

- Using a screwdriver (→ Fig. 28-1), carefully push out the fuse insert (→ Fig. 28-2).
- Remove the fuse insert - it contains two fuses (→ Fig. 28-3).
- Check that the thin wire (→ Fig. 28-4) in the glass capillary of a fuse is intact. If not, replace the fuse (the standard scope of delivery includes two replacement fuses).

**Warning**

Before plugging the power cable back in and switching on the instrument, you must have identified and corrected the cause of the burned-out fuse.

- Insert the fuse insert with the two fuses and start up the instrument again.

---

8.2 Foot switch

![Foot switch](image)

The foot switch is an optional accessory which can be used instead of the START/STOP button.

Order No.: 14 0463 27415
8.3 Buffer tray

8.3.1 Double-walled buffer tray S

**Note**

When using the double-walled buffer tray, the flow cooler must be installed according to the assembly instructions prior to working with specimens.

A clamp for holding the gassing hose for the buffer in the proper position can be added to the double-walled buffer tray.

First connect the hoses (Fig. 31-1), included in the standard delivery of the double-walled buffer tray, to the rear of the Julabo Recirculating Cooler/Chiller FL300, then connect the other end to the empty buffer tray. Access is easier if you make the left connection first. To do so, pull back the lock coupling, attach the hose, and release the coupling until you hear it click into position.

- Hose set for connecting a recirculating cooler/chiller included.

**Order No.:** 14 0463 46423
8.4 Magnifier, LED illumination

**Magnifier**
- To be inserted into the fixture.

**Order No.:** 14 0462 31191

**Module LED Hi-Power spots, 2-arm**
- To be mounted onto the magnifier after the magnifier has been mounted into the fixture. Then, connect the module LED Hi-Power spots, 2-arm, to the Module Hi-Power spot, LED 1000.

**Order No.:** 14 6000 04826

**Module Hi-Power spot, LED 1000**
- Serves as a light source for the module LED Hi-Power spots, 2-arm.

**Order No.:** 14 6000 04825
8.5 Julabo recirculating cooler/chiller FL300

Recirculating cooler/chiller for connection to the double-walled buffer tray in the Leica VT1000 S and VT1200/VT1200 S.

Selectable temperature range: –20 °C to +40 °C.

Recommended cooling medium:
**Antifrogen N** 14 0481 45443
Mixture with water (50 %/50 %)

Application example:
If (at an ambient temperature of 20 - 22 °C) a temperature of 4 °C is to be reached in the buffer trough, the setting value of 0.5 - 2 °C must be selected.

---

**Note**

For additional information, refer to the Instructions for Use provided with this instrument.
9. **Warranty and Service**

**Warranty**

Leica Biosystems Nussloch GmbH guarantees that the contractual product delivered has been subjected to a comprehensive quality control procedure based on the Leica in-house testing standards, and that the product is faultless and complies with all technical specifications and/or agreed characteristics warranted.

The scope of the warranty is based on the content of the concluded agreement. The warranty terms of your Leica sales organization or the organization from which you have purchased the contractual product shall apply exclusively.

**Service information**

If you are in need of technical customer support or spare parts, please contact your Leica representative or the Leica dealer where you purchased the instrument.

Please provide the following information:

- Model name and serial number of the instrument.
- Location of the instrument and name of the person to contact.
- Reason for the service call.
- Delivery date

**Decommissioning and disposal**

The instrument or parts of the instrument must be disposed of according to existing applicable, local regulations.
10. Decontamination Confirmation

Every product that is returned to Leica Biosystems or that requires on-site maintenance must be properly cleaned and decontaminated. You can find the dedicated template of the decontamination confirmation on our website www.LeicaBiosystems.com within the product menu. This template has to be used for gathering all required data.

When returning a product, a copy of the filled and signed confirmation has to be enclosed or passed on to the service technician. The responsibility for products that are sent back without this confirmation or with an incomplete confirmation lies with the sender. Returned goods that are considered to be a potential source of danger by the company will be sent back at the expense and risk of the sender.
